Abstract—This is a minimal document because it's required to submit something. I did this challenge as a kind of solitary hackathon in a couple of long days. It's now 21 minutes before deadline so I can't really describe what I did. It's a simple pattern-based system using phrases, measures, and the melodic contour. I'm sorry for the lack of information here, if it gets anywhere, I'll write up a full report.
